

Taranveer Anand

Cleveland, OH | +1(502) 356-1099 | tsa43@case.edu | [GitHub](#) | [Portfolio](#)

EDUCATION

Case Western Reserve University

Cleveland, OH

Bachelor of Science in Computer Science, Minor in FinTech

Expected May 2026

- **Relevant Coursework:** Machine Learning, Artificial Intelligence, Computational Perception, Data Science Systems, Algorithms, Data Structures, Theoretical Computer Science, Operating Systems, Database Systems, Computer Architecture, High Performance Data & Computing, Software Engineering, Linear Algebra, Probability & Statistics, Differential Equations

EXPERIENCE

Founder

June 2025 – August 2025

Aonix.dev

- Built AI automation systems for U.S. based companies using n8n workflows, custom chatbots, voice AI agents, and CRM integrations to streamline engagement and lead generation.
- Designed multi-step n8n workflows connecting webhooks, APIs, CRMs, email, Instagram, and LinkedIn to automate outreach, intake, follow-ups, and engagement tracking.

Database Developer Intern

Sept. 2022 – Dec. 2022

Guru Amardass Private Limited

- Developed Python scripts for data migration and SQL query optimization, reducing processing time by 40%.
- Built data pipelines to process large datasets efficiently and optimize resource allocation for improved performance.
- Worked with cross-functional teams to debug ERP-related issues, deploy scalable solutions, and improve workflow efficiency.
- Designed dashboards using SQL and visualization tools to help stakeholders interpret business insights effectively.

PROJECTS

Shipped.one | *Electron, React, TypeScript, Prisma/PostgreSQL, Supabase, Redis, WebSockets*

March 2026 – Present

- Built an AI-powered desktop platform that helps users discover matched roles, tailor resumes, generate portfolio projects, and apply across multiple ATS systems through live browser automation and form filling.
- Designed a review-first application pipeline that validates live postings, scores skill fit, previews tailored resumes, and lets users approve, retry, or auto-submit applications through a local browser agent.
- Scaled the product to 50 concurrent users with application tracking, inbox and email signal detection, GitHub portfolio generation, billing controls, and real-time progress updates.

BrainWave | *React, Supabase, WebRTC, OpenRouter AI API, Flask, Authlib, Flask-SQLAlchemy*

Jan 2025 – May 2025

- Built real-time peer-to-peer learning platform with integrated chat, file sharing, voice/video conferencing (WebRTC), shared calendar scheduling, virtual whiteboard, and interactive quizzes for collaborative study sessions.
- Migrated backend from Flask/SQL to Supabase-managed infrastructure (PostgreSQL, Row Level Security, real-time subscriptions, file storage) with OAuth 2.0 authentication for scalable group management.
- Integrated AI assistant powered by OpenRouter (DeepSeek) to analyze chat messages and shared files, generating contextually relevant study aid responses.

SeeCare | **W25 Best Senior Project Award** | *FastAPI, MongoDB, AWS Rekognition/S3, AssemblyAI*

- Developed privacy-first mobile memory aid using facial recognition and conversation transcription to support dementia patients, reducing anxiety and caregiver burden through on-device processing and encrypted storage.
- Implemented real-time face detection with AWS Rekognition and DeepFace embeddings with DBSCAN clustering for unknown face grouping, enabling reliable person identification.
- Built conversation capture system with wake-word activation using Expo Audio, integrating AssemblyAI for speech-to-text with speaker diarization and OpenAI GPT-3.5 for intelligent conversation summarization.

HiveMind | *Next.js, TypeScript, FastAPI, SQLAlchemy/SQLite, LangChain/LangGraph, OpenRouter, WebSockets*

- Built a real-life simulation environment that extracts seed information from real-world inputs such as news, policy drafts, financial signals, reports, and stories to construct high-fidelity parallel digital worlds.
- Designed a multi-agent system where thousands of agents with independent personalities, long-term memory, and behavioral logic evolve socially, generate prediction reports, and let users test what-if scenarios in interactive sandboxes.

SKILLS

Soft Skills: Product Sense, Technical Communication, Problem Decomposition, Rapid Prototyping, Ownership, Cross-Functional Collaboration

Languages: Python, TypeScript, JavaScript, Java, C, C++, Rust

AI & Search Systems: LLM Orchestration, Claude Code, RAG, Embeddings, Semantic Search, Hybrid Search, Multi-Agent Systems, PyTorch, Scikit-learn, OpenCV

API & Platform Engineering: REST API Architecture, Third-Party API Integration, API Discovery, Webhooks, OAuth, WebSockets, Background Jobs, Redis Queues, Browser Automation

Application, Data & Infrastructure: React, Electron, Express, Fastify, FastAPI, Flask, Prisma, PostgreSQL, pgvector, Supabase, MongoDB, Redis, ChromaDB, Docker, AWS, Nginx, GitHub Actions, Linux, Bash, n8n
